**Any anesthetic carries a risk that may result in serious complications or possibly death. The more information we have the safer this risk will be. To minimize these risks, we require a preoperative blood screening and intravenous fluid therapy for all surgery patients. The blood screening checks organ function of each patient, the ability of blood to carry oxygen and the ability to fight infection. A more extensive blood screening is required in patients over seven years of age. Additionally, placement of an intravenous catheter will allow delivery of intravenous fluid therapy to assist in the maintenance of blood pressure and allow rapid access for IV drug administration in the event an emergency situation develops. The blood screening and fluid administration cost for a patient under 7 years of age is \$75.00 and for those 7 years and older it is \$95.00.**
